***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to a rack equipment management system and method, classified in class 713, subclass 300.
- II. Claims 14-20, drawn to program code for managing rack equipment, classified in class 710, subclass 100.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination II has separate utility such as detection of events (e.g. extraction of rack blades) and adjustment of the computer system based strictly on performance requirements without consideration of power consumption. See MPEP § 806.05(d).

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
